BMW
PRODUCT INTELLIGENCE

From customer evidence to a PM decision

Source-linked proposals. A visible rubric. A human approval step.

The G60 / US evidence

The pilot can explain its sample before asking for a decision.

4,365 rows

Imported G60 / US feedback from selected files

72.74%

Of unique feedback IDs in the file are Source B

Priority

A deterministic score with visible heuristic factors

Evidence grade

Source strength shown separately from priority

ROWS AND UNIQUE IDS ARE NOT MARKET SHARE

Priority and proof stay separate

Priority 71.26	A deterministic rubric with heuristic and PM-assumed factors
Evidence grade C	Source quality stays separate from the priority score
264 linked records	Exact workbook rows form a source trail, not full proposal proof

The PM owns the decision

REQ-G60-US-001

Charging

G60 / i5 M60 / US

01 **Reference proposal**

Deterministic, source-linked analysis to inspect

02 **PM assumption**

The 80% target and combined journey need validation

03 **Approval record**

A declared PM approves the version in this prototype

Only affected proposals return

A synthetic charging record tests the later-update workflow.

01

Simulated record

A synthetic item enters the evidence pipeline

02

Charging returns

Only this proposal reopens; approval stays frozen

03

PM review

The PM sees the delta and decides whether to update

Evidence linked. The PM decides.

The charging proposal stays traceable to exact workbook rows.
