Every requirement begins with the customer

Agents read and draft. The product manager decides.

The G60 / US evidence

The pilot can explain its sample before asking for a decision.

4,365 records

Actual G60 / US feedback in the prototype

72.7%

Of records come from one source

Priority

A deterministic score with a visible breakdown

Evidence grade

Source strength shown separately from priority

SAMPLE COUNTS, NOT MARKET SHARE

Priority and proof stay separate

Priority score	Code applies the declared rubric to the same inputs
Evidence grade	Source quality remains visible even when priority is high
Customer words	A requirement opens the workbook, sheet and source row

The PM owns the decision

REQ-G60-US-001

Charging

G60 / i5 M60 / US

01 **AI draft**

A linked proposal the PM can inspect

02 **PM assumption**

An unsupported target stays labelled

03 **Approval record**

The PM edits, explains and approves a version

Only affected decisions return

New evidence arrives during the two-year development cycle.

01

New feedback

A new batch enters the same evidence pipeline

02

Charging returns

The affected requirement reopens beside its approved version

03

PM review

The PM sees the delta and decides whether to update

Agents read.
The PM decides.

Every requirement is one click from the customer's own words.
